MANTYSS-32G
Zynq UltraScale+ Synopsys HAPS Prototyping Module

Fidus – With more than 20 years of experience, we have learned how to transform ideas, visions and concepts into exceptional products. That’s because we are experienced at taking complex problems and delivering solutions against dynamic environments and tight deadlines. We apply our industry experience, and leverage the expertise of our people to make sure your product performs to your expectations before it goes out the door. No exceptions.

The Fidus Mantyss-32G integrates a AMD® Zynq® UltraScale™ with multiple Arm® processors, 32Gbps transceivers, and a collection of other real-world IO peripherals onto a daughter card designed specifically for the Synopsys HAPS prototyping solution. With direct connections to your HAPS system through its HapsTrak™ 3 connectors, Mantyss provides an integrated way of prototyping high speed links and designs containing an Arm processor.
